Phase 1: Empathy Map Canvas

Stakeholder User Experience: Primary Care Physicians & Health Data Analysts

1. User Persona: Primary Care Clinician (Dr. Sarah Chen, MD)

• Says: "I need immediate risk stratification without navigating fragmented lab charts."

• Thinks: "Are these biomarker readings indicating imminent cardiovascular or stroke events?"

• Does: "Reviews patient vitals, orders confirmatory blood tests, counsels on diet and smoking cessation."

• Feels: "Overwhelmed by raw numbers; desires clear, color-coded risk tiers and guideline-based protocols."

2. User Persona: Hospital Analytics Director (Rajesh Patel, MHA)

• Says: "We need population-level dashboards to identify rising-risk cohorts before they require emergency admission."

• Thinks: "Where are the preventable disease clusters and lifestyle gaps in our demographic?"

• Pains: "Unclean raw data, missing fields, or degenerate scores that misrepresent true clinical risk."

• Gains: "Interactive Tableau dashboards, exportable clean CSVs, and an embedded web simulator."
