Phase 3: Formal Project Proposal

Smart Healthcare Risk & Chronic Disease Surveillance Platform

1. Project Abstract & Objectives

This capstone project implements an advanced healthcare analytics platform designed to ingest, audit, and analyze 5,000 patient records across 16 biometric and lifestyle variables.

The proposal establishes a clear timeline for dataset validation, risk score calibration, Tableau dashboard design, web application development, and automated testing.

2. Expected Deliverables

• Validated cleaned dataset (smart_healthcare_dataset_cleaned.csv)

• Functional Tableau workbook and packaged archive (project.twbx)

• Flask web platform with interactive dashboards and risk calculator

• Automated pytest testing suite and complete documentation suite
